

# PROGRAM MANUAL

This program does two things:

1. Creates and validates a license file.
  2. Lets you create user accounts either automatically or manually.
- 

## FIRST TIME RUNNING

- When you run the program the first time, it will say no license was found.
  - It will generate a license key and save it in `Demo_License.dat`.
  - Run the program again after that.
- 

## LATER RUNS

- The program will check the license file.
  - If valid → it continues.
  - If invalid → delete `Demo_License.dat` and run again.
- 

## MAIN MENU

You will see:

1. Run web scraper

2. Add users manually
3. Exit

Type **1**, **2**, or **3**.

---

## OPTION 1 – WEB SCRAPER

- Scrapes names from a website.
  - Creates Linux users automatically.
  - Username format: `firstname.lastname`
  - Password format: `FirstnameLastnameDEELTECH`
- 

## OPTION 2 – MANUAL USER CREATION

- You type in a first and last name.
  - Username and password are created using the same format.
  - The program tries to create the user on the system.
- 

## OPTION 3 – EXIT

- Quits the program.
-
